

SPRINKLER SPACER SYSTEM

Abstract of the Disclosure

A support system for supporting a sprinkler head which is connected to a water supply line by means of a flexible pipe. The support system includes a spacer body having inner and outer portions and is capable of being attached to a sprinkler head. An elongated stake member is carried by the spacer body and extends downwardly from the spacer body to provide lateral support to the spacer body and the sprinkler head when the stake member is inserted into the ground.
